

Identify gatekeeper courses, review key success metrics and discuss ways to improve the completion rates within your department. 7 gatekeeper courses as those in which many students struggle to complete and prevents them from completing a program of study.

1. Before reviewing any data, (i.e., low success rate or prevent from completing program)?

Click here to enter text.

2. Students may drop courses for a variety of reasons (to enroll in a different course, because the course material is too difficult, preference for another instructor, life events, etc.). @ efined by

The data in the Student Success & Equity dashboard presents course-level data since 2017SU. This data will always lag a semester to capture the necessary success metrics. The colors represent Z-score distributions, so red indicates one standard deviation below the mean, green indicates one standard deviation above and clear indicates no significant change in a given metric. Basically red colors indicate an area of concern, and green areas should be applauded. Please note that you may need to use a browser or a virtual machine to access the dashboard: <https://flexit.hartnell.edu/#analysis/success-analysis>

A course is a gatekeeper if _____ of the following statements are true:

- a) The course is a _____ for subsequent courses in the program.
- b) The course has a _____ (i.e., $\geq 20\%$).
- c) The course has a _____ (i.e., ≤ 70).
