

This Integrated Master Planning Framework provides principles and parameters for decisionmaking at the College.

The principles of effectiveness and efficiency are designed to collectively ensure that the optimal combination of programs and services, use of internal resources, and participation of external partners are applied to maximize achievement of institutional student success, equity, and enrollment goals. Decision-making will typically involve the consideration and application of multiple principles, where some are primary and others are secondary or non-applicable. The key goals, types of programs and services, internal resources, and external partners linked to each principle are indicated in the two charts displayed on subsequent pages.

Appendices include lists of relevant institutional guidelines, institutional requirements, and external directives, collectively representing parameters that guide and constrain choices. Also included to assist in decision-making is a non-exhaustive list of key terms and metrics associated with the effectiveness and efficiency principles.
